

Lactoflora intestinal protector is recommended for:

1

Helps to restore balance to a damaged intestinal microflora: changes in diet, treatment with antibiotics, stress at school, exams or other worries can result in an imbalance in the intestinal flora.

2

Restores the balance of the intestinal microflora and strengthens the bodies natural defences.

Our intestines are colonised by billions of bacteria from over 400 different species that make up the intestinal flora. Lactobacillus and Bifidobacteria constitute important components of the intestinal flora: their presence helps to block the action of harmful or pathogenic bacteria, encourages vitamin synthesis, improves enzyme activity of the intestinal mucous membrane and stimulates the immune system.

However, changes in diet, treatment with antibiotics, stress at school, exams or other worries can result in an imbalance in the intestinal flora that may be associated with pathological conditions.

If this happens it can be of benefit to restore the balance of the intestinal flora by administering prebiotics and probiotics. Prebiotics are non-digestible carbohydrates which, when consumed, aid in the growth of microorganisms that are beneficial for the intestinal flora. Probiotics are specifically selected live microorganisms which, when consumed in the right quantity, colonise the intestinal tract to help restore its balance and produce substances that are beneficial for the body.

How does Lactoflora Intestinal Protector work?

In order for the live bacteria in Lactoflora intestinal protector to reach the intestine in perfect condition, each container, in addition to prebiotics and probiotics, also contains aloe vera and carrageenan. Once the contents of the container have been consumed and the aloe vera and carrageenan come into contact with the gastric acid they turn into a gel that protects the bacteria as they pass through the stomach, to keep them intact when they reach the intestine. With the increase in the pH of the intestine, the gel becomes more viscous, thereby slowing down the transit of the probiotics and improving their adhesion to the intestinal wall, enabling the bacterial flora to be restored. Also intestinal function is normalised and the body's natural defences are strengthened.

Lactoflora®

Restores & maintains the intestinal flora

- Always store below 23°C. If the recommended temperature cannot be assured, store in the refrigerator
- Mix with cool liquids
- Lactoflora should be taken after a course of antibiotics

Strawberry flavour - from 6 months. Lactoflora intestinal protector - 5x7 ml vials.

Lactoflora®

Restores & maintains the intestinal flora

FOR KIDS

Food supplement with prebiotics and probiotics

**FOR
KIDS**

Lactoflora®

Restores & maintains
the intestinal flora

Restores and maintains the intestinal flora

Lactoflora intestinal protector is a symbiotic (probiotic+prebiotic) that restores the intestinal microbiota and stimulates the immune system, helping to protect us from pathogenic microorganisms

1

Probiotics

Living lactic cultures (per vial)

Bifidobacterium lactis B104®

Lactobacillus acidophilus La-14®

Lactobacillus plantarum Lp-115®

Lactobacillus paracasei Lpc-37®

2

Prebiotics

These induce the growth of microorganisms that are beneficial for the intestinal flora, synergistically extending the individual response of each probiotic.

- Arabino-galactan-oligosaccharides
- Beta-glucans

3

Vitamins

- Niacinamide
- Vitamin B5
- Vitamin B6
- Vitamin B1
- Folic Acid
- Vitamin B12

4

Patented Formula

With Aloe Vera and Carrageenans which protect the probiotic from the acidic pH in the stomach to maximise the delivery of the probiotic to the intestine.

To achieve an optimal quantity of probiotics in the intestine and maximum benefits, we recommend taking one or two full packs per month

1 vial a day
after the
main meal

How to use

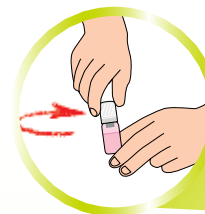

To restore the intestinal flora

**FOR
KIDS**

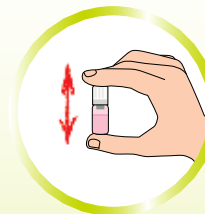

Children (from 6 months)
strawberry flavour)

Lactoflora®
**FOR
KIDS**

1 vial/day - 5 days

1. Screw the cap clockwise until tight (keeping the container vertical)

2. Shake the suspension vigorously

3. Unscrew the cap and drink

Lactoflora®

**FOR
KIDS**

Restores & maintains
the intestinal flora

Food supplement with prebiotics and probiotics
